In the claims

Please cancel claim 18 without prejudice of disclaimer and amend claim 1 as follows:

1(Amended). A process for making a different types of integrated circuit, comprising:

- a) providing a substrate or epitaxial layer of p-type material; and
- b) selecting a sequence of mask steps from a predefined set of mask steps selected from the group consisting of:
 - (1) applying a first mask and forming at least one N-well in said p-type material therethrough;
 - (2) applying a second mask and forming an active region therethrough;
 - (3) applying a third mask and forming a p-type field region therethrough;
 - (4) applying a fourth mask and forming a gate oxide therethrough;
 - (5) applying a fifth mask and carrying out a p-type implantation therethrough;
 - (6) applying a sixth mask and forming polysilicon gate regions therethrough;
 - (7) applying a seventh mask and forming a p-base region therethrough;
 - (8) applying an eighth mask and forming a N-extended region therethrough;
 - (9) applying a ninth mask and forming a p-top region therethrough;
 - (10) applying a tenth mask and carrying out an N+ implant therethrough;
 - (11) applying an eleventh mask and carrying out a P+ implant therethrough;
 - (12) applying a twelfth mask and forming contacts therethrough;
 - (13) applying a thirteenth mask and depositing a metal layer therethrough;
 - (14) applying a fourteenth mask and forming vias therethrough;
 - (15) applying a fifteenth mask and depositing a metal layer therethrough; and
 - (16) applying a sixteenth mask and forming a passivation layer therethrough; and

wherein said sequence consists of at least said mask steps 1 to 3, 5, 6, and 10 to 16 and at least one of said mask steps 4, 7, 8, and 9 depending on the type of integrated circuit; and

performing said selected sequence of mask steps in numerical order.
